November 2012

Dear Client:

Crosstech Systems is happy to report that we are ready to provide significant improvements to the software you work with daily. We have at our disposal new technology from Application Development Systems, Business Rules 4.3x that can make your life easier. In particular, our new product offers the following features:

- Business Rules is now in two versions a 32-bit and 64-bit which can be intermixed. Processing speeds will be increased utilizing the 64 bit architecture available on Windows 7 & 8 64-bit operating system.
- Future release of Crosstech which will take advantage of Business Rules new client-server capabilities. The BR Server module allows access thru IP using the client module. Load the BR Server along with a BR listener on the server, and users can access across the web and in the office. (Please note the client module will be available in a future release by Crosstech Systems).
- Screen will be sharper with new independent windows, open an inquiry, printing options, report screen and a new window will open that can be moved around the screen. Change the size of the open window, move it to view the screen in the background, click on the top right X to close the current active window.
- Enhanced report printing option, using PDF file format, save the report in PDF file for email, and historical use. Use Adobe Reader or other PDF file readers to view and print your reports. Add a file cabinet to your computer, storing historical reports, saving on paper, and office space.
- External windows controls added to Crosstech applications to enhance the Windows touch, look and feel. An example would be a calendar pop-up. There are thousands of windows external controls to be added within the data entry.
- The data entry screens have many improvements, including increased ease of user functionality. The data entry will use many of the new Windows controls.
- Enhanced Grid, and List View features, these are the data entry which looks like a spread sheet and is seen on our inquiries routines.
- Communicate with the HTTP Internet world and XML files, filling in screens for UPS Shipments, State and Federal Form employee reporting, State and Federal payments, within Crosstech in the near future.
- Significant enhanced capabilities in the background allowing for increased speed, larger data field. The developers at Crosstech, find the new Business Rules features from each release to allow for programing that can accommodate the needs of our clients now and in the future.
- Indexing and sorting has been significantly improved with regard to speed.
- **A list of features is included with each application.**

The new platform has been developed for Windows 7 & 8, Vista, XP and 2000 use. Supported Network platforms include Windows Server 2012, 2008 and 2003. Supported Peer to Peer Network platforms also include Windows 7 & 8, Vista, and XP. Please call about any other Operating Systems and/or Network platform compatibility questions.

Provision for these feature benefits required the implementation of new technology. We have developed an upgrade package that significantly advances the technology you work with daily for a very moderate upgrade charge. We are currently looking at making even more changes this coming year. Applications will continue to evolve, faster now than they have in previous years.

We are certain that these upgrade options and the future capabilities that they represent, will be a reassuring factor to all of you. We look forward to many more years of continued service to your company.

Sincerely,

CROSSTECH SYSTEMS, INC.
